from the Principal's Desk

Last newsletter I wrote about a growth mindset and the main points were:

- Learning and excellence is the result of deliberate practice
- growth mindset is the belief that people can learn to be more intelligent, improve their abilities, and develop talents

The focus of this newsletter is the Habits of Mind. Art Costa identified 16 habits that successful people demonstrate, he called these the Habits of Mind. These people not only persist, they are effective and skilled at persisting. They are not only risk takers, but they have developed their ability to take risks to a high level.

Habits of Mind represent the dispositions that bring about success in learning situations. While all are important (an on-line search will identify all 16 habits) several are closely related to the development of a growth mindset. One is "Striving for Accuracy", students develop strategies for self-correcting, they engage in learning that encourages them not to settle for "good enough" and helps them recognise quality work. Therefore persistence is the endeavour to overcome challenges and achieve quality. Risk taking is another key characteristic, students take risks by recognising and minimizing negative consequences, they plan for what to do if their plans don't work out, they try different strategies. Seeking feedback is another habit, students should talk to their teacher about their work with improvement in mind and maybe produce a number of drafts before the final piece of work is completed.

In the next newsletter I will write about the things Braeview teachers are doing to build upon this Growth Mindset and Habits of Mind and how they contribute towards improved learning for our students.

Pastoral Care Worker - Holly Goder

At school on Tuesday & Wednesday 9am - 3pm

SUN SMART: Last year there were changes to the Sun Smart Policy. Students are now required to wear hats in Term 1, Term 3 and Term 4

Around the Classrooms: A Focus on Science

A few classes are covering Chemical Sciences. All units are supported with the construction of Technical Vocab Word Walls. These support students to use technical vocab when describing their understanding

Earth and Space Science is another Science Strand. Ms Somerset's Year 1/2 students are learning about natural disaster which includes volcanoes.

Biological Science includes Living Things. Ms Livingstone's R/1 students are learning about Australian animals. This week they went to the Adelaide Zoo.

Ms Butler's Year 6s have been studying the growth of fungi.

In the Junior Primary Special Options Class, students have been learning about plants

SUN SMART: Last year there were changes to the Sun Smart Policy. Students are now required to wear hats in Term 1, Term 3 and Term 4

Raising Kids with grit

Being the best Resilience Coach for your kids so they can navigate life's ups and downs

Woodend Primary School
Edward Beck Drive, Sheidow Park
Light refreshments will be served following the presentation

RSVP by 25 August via Eventbrite
<https://raisingkidswithgrit.eventbrite.com>
For any further enquiries please contact Natalie on 8202 7657

SEMINAR PROUDLY PRESENTED BY

Credit Union SA's School Community Rewards is giving back to South Australian schools and their communities by sponsoring this rewarding and informative seminar with Bill Hansberry.

Bill Hansberry is a husband, father, mentor, teacher and author. He lives in Adelaide and is married with three children. He is also the co-author of *Raising Beautiful Kids*. Bill mentors young people who live with a wide range of challenges such as learning differences/disabilities, emotional or behavioural difficulties and those who are just doing it tough.

Alongside this work, Bill has the privilege of supporting and mentoring teachers, school leaders and parents, assisting them to work together to meet the needs of these students.

School Community Rewards is an incredibly easy way to help improve the future of your family and your children's school. A School Community Rewards representative and Credit Union SA mobile manager will be available on the night to answer all your questions about this fundraising initiative.

SEMINAR PROUDLY PRESENTED BY

SUN SMART: Last year there were changes to the Sun Smart Policy. Students are now required to wear hats in Term 1, Term 3 and Term 4

Head Lice

We have had several cases of head lice at the school. We ask can you please check your child's hair and treat if necessary.

Thank you.

Head Lice Facts

Head lice like anybody with hair

- Lice do not jump, hop or fly. People become infected by the lice swinging like trapeze artists from hair on one head to the hair of another head.
- Lice may move onto hats, combs, helmets, hair ties and other surfaces, but must return to a human head to survive within 24 hours.
- Head lice do not live in carpets, sandpits or on animals.
- Not everybody will itch so you must look for lice and eggs (nits).
- Adult head lice are the size of tiny ants and range in colour from skin-tone to dark brown. Each of the six legs of a head louse ends in a claw. These are used to grasp the hair with such strength that head lice are difficult to dislodge.
- Nits are the eggs laid by female lice and are the size and colour of a grain of sugar. Heat generated by the body hatches eggs.
- Eggs are laid very close to the scalp and stick like glue to the hair. They hatch within 7 days. The earlier the lice are identified and treated the less time there is for eggs to hatch.

Treatment and prevention

- Removal of eggs must be done following application of head lice treatment. Eggs can be removed by combing with a special head lice comb or with the fingernails. If eggs are not removed the problem may recur.
- Conditioner applied to dry hair weakens the grip of the lice and makes it difficult to hang onto the hair. Comb the hair with a special head lice comb and look for the lice by wiping the comb onto a tissue. The eggs are also easily identified this way.
- Lice live on strands of hair but move to the scalp to feed. It is important that all of the hair is completely covered with the head lice treatment and is used according to instructions.
- No head lice treatment will kill 100% of the eggs. You must use the treatment 7 days after the first treatment to kill any lice that may have hatched.
- Wash combs, brushes, hair ties and hats in detergent and hot water.
- There are 4 different types of head lice treatments available. All have different main ingredients, eg pyrethrins, synthetic pyrethrins, malathion and herbal agents. If a head lice problem continues try a treatment with a different main ingredient.
- It is not as essential to wash bed linen as it is to treat the head and comb etc.
- Lice can be weakened by thoroughly brushing hair morning and night. When injured or weakened, lice have difficulty gripping the hair.
- Gel and hair spray applied to the hair can be used as a preventative measure against infestation – these products make the hair sticky thereby making it difficult for them to move around on the head
- Get into the habit of checking the hair every time it is washed. Daily checking is necessary if there is an outbreak as everybody may not itch
- Avoid direct head to head contact with others.
- Don't share hats, combs, hair ties etc.
- Keep long hair tied back or plaited.
- Never use treatments as a preventative.

It is not as essential to wash bed linen as it is to treat the head and comb etc.
